Group Feedback:

We discussed our project proposal with the hurricane visualization team (Linda Gorman, John Muhs, and Alejandro Palimino).

Overall Impression: The group thought that it was a cool idea, but they thought it could pose some technical difficulties if we had to handle all of the features and data we had discussed previously.

Feedback: It is currently difficult to select specific data points. How could you increase flexibility with the selection of dates?
- Action: We'll be adding a calendar view that allows the user to select specific time points. This will allow for the user to easily select a time point rather than have to use a slider.

Feedback: It sounds like you have a lot of data. How will you handle all of this data?
- Action: Rather than rendering daily data, we'll be using monthly data inside of our project. This will reduce the necessary data by ~30 fold.

Feedback: What other data sets could you leverage?
- We discussed how we're working with our collaborators to obtain data about ocean temperatures and sunshine.
- Action: No action taken immediately. We'll be following up with our collaborators.

Feedback: You seem to have a lot of features. How can you go about targeting your development?
- Action: We decided to remove some of the features from the first milestone of our project. We'll be revisiting these features after the milestone to see if we'd be able to implement them.
- Action: Another option is to use two different windows- one for a global overview of the data and one for a localized view of a specific time point.
